KSH-120DX

Need a pellet burner?

BIG in features, SMALL in cost.

# KOZI PELLETT SHOP HEATER

The **KOZI** KSH pellet shop heater is an economical solution to today's rising heating costs.

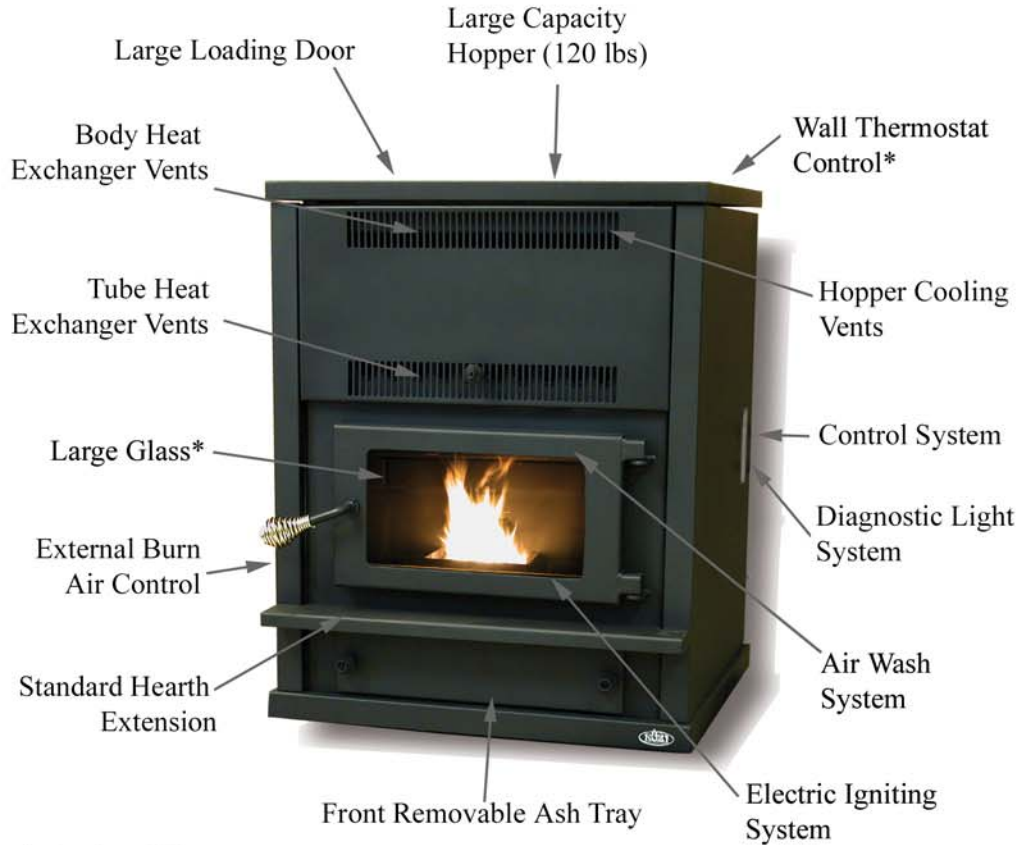

These heaters are efficient, easy to use and operate. With an efficiency rating of 86%, the KSH shop heater is ideal for all of your shop or home heating needs.

This economically priced stove is loaded with state of the art safety features, which ensure safe and reliable operation. The easy to use MX Control Board makes starting your heater a snap. It can be operated manually or controlled with the use of a wall thermostat.

All you need to do is load the hopper with pellet fuel and start the heater.

Once the KSH has been started, the pellets will automatically feed into the burn pot at your desired rate. The pellets will then ignite within 5 to 7 minutes. The flame will become established and begin to warm the heat exchanger tubes. The circulation fan will push cool air through the heat exchanger and transfer the heated air into the room.

Now you can enjoy the traditional warmth of a **KOZI**.
